November 22nd, 2019 - Homological algebra We learn the basics of homological algebra through the study of group homology and cohomology Group cohomology can be defined algebraically but it was originally defined by topological methods Namely the cohomology of a group  $G$  is the singular cohomology of the classifying space a certain associated topological space of  $G$ " **Lecture Notes in Algebraic Topology**

~~December 18th, 2019 - some basic homological algebra including the universal coefficient theorem the cellular chain complex of a CW complex and perhaps the ring structure on cohomology We have included some of this material in Chapters 1 2 and 3 to make the book more self contained and because we will often have to refer to the results'~~
